Basics of Quantum Information

Issued by [IBM](#)

This credential earner is able to describe quantum information at a foundational level. Additionally, they are able to describe fundamental concepts, such as quantum teleportation, superdense coding, and the Clauser, Horne, Shimony, and Holt (CHSH) game — all of which are connected to the phenomenon of entanglement. The individual has gained the core skills required to explore deeper fundamental quantum algorithms and start using Qiskit Runtime.
